

For the Best, Buy British

The highest quality synthetic grass is manufactured right here within the UK. Benefits of selecting UK manufactured grass for your project include:

- Our grass is made to order in most cases, and not stockpiled. It's also not packed into shipping containers for transportation. This **prevents compaction problems** and ensures the grass arrives on site in optimum condition.
- Our grass is manufactured and supplied in accordance with a **quality management system** which complies fully with the requirements of BS EN ISO 9001:2008.

Our ethos for continual research and development ensures we remain at the forefront of synthetic grass manufacturing and has enabled the following innovations:

- Development of a technique to overcome bundle-lock issues, **preventing a severe loss of fibre** in monofilament based synthetic grasses. Many other manufacturers still experience this problem.
- Development of a unique backing system, incorporating an unfilled latex secondary backing, allowing **natural drainage** of up to **10 times the minimum recommended rate**. The backing has **NO punched holes** as these damage the surface, hinder drainage and can cause synthetic grass movement.

Over the past 30 years we've manufactured in excess of 4 million square metres of synthetic grass for the sports and leisure industry. With a full range of surfaces for hockey, football, rugby, multi-use, tennis and cricket, our synthetic grass products meet guidelines set by the FIH, IATS, IRB & LTA.
