

CRICKET WICKETS – MAINTENANCE

As with all synthetic surfaces during their life span, over a period of time Cricket Wickets fall foul to the elements of;

- The over growth of grass and other vegetation to its edgings
- Undulations and irregular levels to the sub-base

We at **Protech AllWeather** specialise in the maintenance of Cricket Wickets and our highly trained technicians pride themselves on returning your Wickets to a good playing nature with the minimum of disruption.

HOW IT WORKS – “WHAT WE DO”

- The wicket edges are cleaned of fauna
- The wicket is lifted and the base re addressed
- The wicket is then replaced & cleaned by means of power wash & power brushed
- This leaves the wicket clean and in good playing order
