

'SPORTSROLL' Synthetic Cricket Surface

Roll Up/Roll Out Cricket Surface
Code No: ISS-C0147

Tried & tested over a number of years, **Sportsroll** is a roll up/roll out cricket surface suitable for use both indoors and outdoors.

Surface

UV stabilised green needle punched polypropylene providing excellent grip and wear characteristics. This also allows the ball to grip and turn giving encouragement to spin bowlers, a feature often absent from indoor surfaces.

Backing

Heavy non slip polymer backing providing strength and allowing surface to roll out flat time and time again without curling at the edges and corners. Textured finish to backing absorbs energy and reduces pace off both solid and other indoor surfaces.

Size

Sportsroll is supplied in 2.00m widths, in lengths to suit customers requirements.

Length Recommendations

ECB (England & Wales Cricket Board) recommends lengths of 15m for indoor matting.

Maintenance

Easy to clean, the surface will accept a number of marking materials.

Handling & Weight

Approximate weight is 3.75kgs/m². To avoid injury due to the weight, it is recommended that the surface is rolled into position and only lifted when sufficient personnel are present. Alternatively, mobile handling units can be supplied that allow the rolls to be lifted and wheeled in and out of storage areas.
